WE ARE ALFATEC PRO

WHO WE ARE ?

Alfatec Pro is a company oriented to customers needs and the challenges posed by the market. The range of perfectly selected activities and processes is ensuring quality, competitive prices, fast delivery and reliable service.

**GO GREEN
GO BIG
GO PRO**

BRAND ATTRIBUTES

PROFESSIONAL

Our company is oriented to customer needs and we are the experts in fulfilling them. We have a clearly defined goal of action and we are confident in the implementation of our business goals. We feel confident and comfortable in every situation.

STRONG

We owe our current position to many years of consistent work and constant development of the company. Our brand has a strong position in the market and being with us means a guarantee of quality. We talk about it loudly.

POSITIVE

Our passion drives us. We try to create a business in a friendly manner and convey this positive emotions in our relations with clients.

**ALUMINIUM
CONTAINERS**

ALUMINIUM CONTAINERS

Aluminium containers are one of the most universal types of packaging for foods. They protect delicate foods from deformation or damage. They are incredibly practical, because they enable to carry out the whole production process in one container - from forming, through baking, storage and even freezing.

Aluminium containers find wide range of usage in meat, fish, bakery as well as vegetable and fruit industry. With an eye to owners of restaurants, fast food bars, bistros or catering companies, we recommended functional aluminium packaging. The specially selected materials are lightweight and flexible, while also retaining heat. For this reason, it is ideal for packaging takeout meals. The proposed item is a perfect, cheaper alternative to traditional baking trays - our product can successfully be used for baking cakes, lasagna or other oven-prepared dishes.

SERVICE

ALUMINIUM VS NATURAL ENVIRONMENT

NATURAL RAW MATERIAL

Aluminium is the most common metallic element in the world and it provides around 8% of the Earth's crust.

Aluminium is called „green metal” because it is a material which is relatively easy to recover. Approximately 15 millions tons of aluminium per year is being recovered from selective collection of waste.

CONTAINER DISPOSAL

According to Polish regulations, aluminium moulds should be found in yellow containers for meals and plastics. Before disposal, it is worth removing any leftovers from them.

ALUMINIUM RECYCLING

Aluminium is a secondary raw material that is fully recyclable - 95% of existing aluminium packaging is recycled

Aluminium recovery can be carried out indefinitely without causing any loss of metal quality.

Aluminium is completely recyclable and therefore does not have to go to landfills.

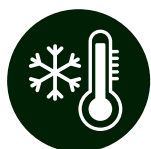

QUALITY IN ALFATEC PRO

Aluminium and paper packaging of ALFATEC PRO are products intended for contact with food, do not contain any heavy metals and meet the standards of national and European Union legislation for this type of

Alfatec Pro Sp. z o. o. meets the requirements of GLOBAL STANDARD for PACKAGING MATERIAL Issue 6, August 2019, which makes the company a trustworthy business partner.

CHARACTERISTICS OF ALUMINIUM CONTAINERS

-40°C TO +350°C

BAKING AND FREEZING IN ALUMINIUM CONTAINERS

Food in aluminium containers can be cooked and heated with a convection oven, microwave and be subjected to the process of deep freezing. The aluminium container is gaining more and more recognition among customers due to its properties related to the wide mechanical resistance, both at low and high temperatures (from -40 Celsius degrees to +350 Celsius degrees) !!!

SOUR AND SALTY FOODS

ALUMINIUM CONTAINERS AND ACIDIC FOODS

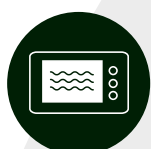

Aluminium containers must not be used for storing and processing acidic foods. Aluminium containers must not be used in acidic and salty environments, this increases the penetration of aluminium ions into food. Excessive consumption of aluminium ions does not have a positive effect on health. WHO has established a daily safe aluminium intake of 1mg/1kg body weight.

STORAGE

STORING FOODS IN MOULDS

Aluminium does not carry or support bacterial growth and can help extend the life of sensitive products for many months or even years. Aluminium containers are safe to use in contact with food and does not affect the taste and aroma - fully preserves the original aromas and properties of the product. They constitute a total barrier to light, gases and moisture. Aluminium packaging can be subjected to a thermal pasteurization or sterilization process. Aluminium trays are grease resistant

MICROWAVE

USAGE OF ALUMINIUM TRAYS IN MICROWAVE

Aluminium containers can be used in a microwave oven provided that certain conditions are met:

- The aluminium lid must be removed from the tray before use
- The meal should cover most of the floor on the tray
- Place the aluminium tray in the middle of turntable in the microwave oven. (Attention: If your microwave is equipped with a metal turntable, please place a ceramic or glass plate beneath the tray.)
- The aluminium dish must not come into contact with the walls of the microwave oven- minimum distance to the walls is 2 cm.
- Only one aluminium tray may be used in the microwave oven at a time.

jNot suitable for microwave ovens constructed before 1983.

Ultra Forza is a range of aluminium containers which represents true innovation in the world of cooking.

Roasting pans designed by Giugiaro Design have reinforced structure which-with the same amount of aluminium- increases strength and resistance to tension- by 20%.The additional corrugations increase the non-stick properties and allow for better heat distribution.

PAPER MOULDS

PAPER MOULDS

Paper containers are an alternative to traditional tin, silicone and ceramic forms. They do not leak and are more resistant to grease. Their great advantage is low unit cost. The print on the packaging does not penetrate the product, the form does not affect the taste or smell of the baked final product.

Paper packaging is intended for contact with food. It can be used in traditional oven, microwave and freezer.

Paper packaging is used in the confectionery, bakery, meat and fish industries and for packaging ready meals. Paper forms are also successfully used in cafes, catering companies and home kitchen.

PRODUCT'S FEATURES

COCOA molds are designed for confectionery, vegetable, or meat products.

Maximum temperature: 220°C
Minimum temperature: -18°C

The packaging is made from cellulose derived from cocoa bean husks.

PRODUCTS ARE INTENDED TO CONTACT WITH FOOD

The COCOA series packaging has a unique, natural aesthetic achieved without the use of chemicals, resembling cocoa or coffee.

Cocoa Paper™ is the result of an innovative technology that utilizes the husk remnants from cocoa processing and transforms them into paper of exceptional quality with a natural texture and distinctive appearance.

PLUMPS 80 TERRA	80x40	40	600
MUFFIN TERRA	50	40	5120
TULIP TERRA	50	150	2760

PRODUCT'S FEATURES

TERRA molds are made from grass paper, an eco-friendly material that gives them a unique appearance and meets all the necessary criteria for food contact and use in the oven.

Maximum temperature: 220°C
Minimum temperature: -18°C

PRODUCTS ARE INTENDED TO CONTACT WITH FOOD

The Terra series packaging is a new line of baking molds made from grass paper. These products have a lower environmental impact compared to traditional molds.

Compared to an equivalent product made from pure cellulose, the production of this paper offers the following environmental benefits:
Terra is made up of 40% grass fibers. The fiber is collected during the mowing of golf courses.

Lower CO2 emissions compared to traditional products.
The paper is free from PFAS. The paper is compostable and has TÜV Austria certification.

UPCYCLING - NEW LIFE FOR WASTE

Bagasse, waste from production of sugar cane is used to create another useful item- in this case, ecological disposable packaging.

COMPOSTABLE PACKAGING

Sugar cane containers are compostable. They will decompose in an industrial composting plant as well as in home composter. The decomposition time of the packaging takes between 3-12 months, depending on temperature, humidity, access to oxygen, bacteria and fungi.

Packaging from the PRO NATURA collection are certified by „OK. COMPOST Home” and „OK. COMPOST industrial”
